

Sentence Practice

• 정답 p. 81

C 다음을 /로 끊어 읽기를 표시하고, 빨간색으로 된 부분에 유의하여 해석해 봅시다.

^①In school, we usually learn that only plants make oxygen, but scientists found special

rocks deep in the ocean that also do this. ^②These rocks are called polymetallic nodules.

^③They are very deep—about 4,000 meters under the sea. ^④These rocks work like batteries

that can break ocean water into hydrogen and oxygen. ^⑤What's cool is that they can do

this without sunlight!

^⑥However, this amazing gift of nature doesn't exist in every part of the ocean. ^⑦In fact,

scientists have discovered many deep-sea areas **where** no life can survive. ^⑧Why does this

problem happen only in certain parts of the ocean? ^⑨One possible reason is that too many

of these rocks **have been taken away** for industrial use. ^⑩If humans take away too many,

we could damage the ocean and turn it into a place **where** nothing can survive. ^⑪It's truly

amazing that such tiny rocks can be so important for sea creatures. ^⑫Nature never stops

amazing us.
