Sentence Practice

● 정답 p. 80

C 다음을 /로 끊어 읽기를 표시하고, 빨간색으로 된 부분에 유의하여 해석해 봅시다.

❶What makes us sick? ❷A long time ago, a scientist named Louis Pasteur said that tiny things **called germs**, like bacteria and viruses, make us sick. ❸But some other scientists didn't agree. ❹They thought bacteria showed up after we got sick, not before. ❺They said bacteria were like flies. ❻Bacteria are found in sick bodies, just as flies hang around rotten food. ❼But flies don't make food go bad; they come after it's already spoiled. ❽Similarly, bacteria are in sick bodies to help break down dead cells and clean up, not to cause illness.

❾Today, doctors often say **bacteria make us sick** and give us medicine called antibiotics. ❿But maybe that's not always the answer. ⓫Killing bacteria is like killing flies—it doesn't fix the problem. ⓬We might not get better just because the bacteria are gone.

⓭It's interesting that Pasteur changed his mind before he died. ⓮He said, "Germs are not the problem; **how strong our bodies are is the most important thing**." ⓯If that's true, being healthy is more about having a strong body, eating good food, and moving our bodies than killing germs.
