

Sentence Practice

• 정답 p. 68

C 다음을 /로 끊어 읽기를 표시하고, 빨간색으로 된 부분에 유의하여 해석해 봅시다.

^①Many stars that we see in the night sky are not really there. ^②Stars are so far away from

us. ^③Sometimes a star's light might reach us long after the star stopped existing.

^④For example, the light from Proxima Centauri takes more than four light years to reach

us even though it is the closest star to us besides the sun. ^⑤Therefore, **if its light went out**

today, we **wouldn't realize** it until four years later. ^⑥Some stars we "see" today may have

died before the Korean War, and others before King Sejong invented Hangul.

^⑦The most distant stars visible to the naked eye are 2.6 million light years away. ^⑧Some

of these stars **whose** light we still see today may have disappeared hundreds of thousands

of years ago. ^⑨**The fact that we see light from stars so far away** proves that the universe

is huge.
